DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 3, 4, & 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Soumiya et al. (U.S. Patent No. 5696764) in view of Ichikawa (U.S. Patent No. 6301253 B1).
 - With respect to claims 3, 4 & 12, teaches ATM switch comprising:
- a buffer device which comprises a buffer section having a plurality of buffers and a cell reading section for reading data from the buffer section (e.g. shared buffer 62, blocks 71b, and 71c in Fig. 8);
- a data input/output device which comprises a data input section for inputting data from an external source, a data output the data, and a first data transceiver section for performing reception and transmission with respect to the data (e.g. the mux 61 and demux 64 combined, in Fig. 7);
- a data processing device which comprises a second data transceiver for performing reception and transmission of data in connection with the first data transceiver section (e.g. the QoS control portion 70), a data analysis section for analyzing the data received from the second data transceiver and a data reading/setting section (illustrated in Fig. 8);

Art Unit: 2666

and wherein the data input/output device is capable of inputting and outputting data regarding a service class of a buffer as a service category and a QoS class (e.g. col. 18, lines 35-41, lines 54-67).

Soumiya fails to teach the data processing device is capable of adding and storing new data regarding at least one of a new service category and a new QoS class. Ichikawa teaches the of buffer regarding to the QoS (col. 8, lines 25-38) for providing QoS and controlling the traffic in communication system. Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to implement the method of changing a state of buffer to meet the QoS and control the traffic in the communication.

Response to Arguments

3. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

The following claim 4 was indicated allowable by examiner in previous office action; however, these claims are unpatentable in view of new arts. Therefore, these indicated claims are withdrawn.

Applicant's arguments with respect to claims 3, 4 and 12 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 09/313,079

Art Unit: 2666

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHUC H TRAN whose telephone number is (703) 308-7471. The examiner can normally be reached on M-F (8-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RAO SEEMA can be reached on (703) 308-5463. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 872-9314.
